

Task - Service to send email

Description :

Create a POST api which will accept receiver email address & email content in the request body and send an email to the receiver with email content present in the request body.

Sample request body -

```
{
  "to": "srimanta@gmail.com",
  "email_body": "Hi there..."
}
```

In case of **success** in sending email, service will respond as -

```
{
  "success": true,
  "message": "Email sent successfully"
}
```

In case of **failure** in sending email, service will respond as -

```
{
  "success": false,
  "message": "Error message"
}
```
